Cylinder Trolley

Gas Cylinder Trolley

The gas cylinder trolley, made entirely of white-painted tubular steel, is designed for transporting medical gas cylinders, two versions are available to suit different cylinder sizes: one version for 10 L cylinders and one version for 40 L cylinders.

The first model has 4 swivel casters, two of them are braked, and the trolley is designed to prevent overturning, while protecting the cylinder from knocks. The 40 L model has two fixed wheels, and two swivel casters onto which the trolley can be tilted, a baseplate to load the cylinder easily and a safety strap to hold the cylinder in place. Both versions have handles to facilitate transportation and maneuvering.
